INDEX TO VOLUME XX.

A.

Academy of Natural Sciences of Philadelphia, 414.
Academy of Sciences of St. Petersburgh, 389.
Acetate of morphine, 184.
Acetic acid, crystallizable, 186.
Achromatic microscope, 265.
Addition to Prof. Johnson's article, 418.
Aikin's Dictionary of Chemistry, 93.
Aldini, Ch., on protection from flame, 96.
Alum in mica slate, 418.
Aluminium, preparation of, 408.
American Birds, new work on, 161.
American Botanical Register, 160.
Analysis of Black Sea, 188.
——— Brewsterite, 198.
——— the Protogea of Leibnitz, 56.
Analytical geometry, 285.
Angina pectoris, use of iodine in, 411.
Anthracite mines, 165.
Antique medals found near Geneva, 391.
Arsenic in sea-salt, 193.
Asbestos impregnated with platinum, 160.
Asparagin, 187.
Atholl, Duke of, notice concerning, 307.
Atlantic coast, prevailing storms of, 17.
Atmosphere, carbonic acid in, 183.
Augite, affinity of to the Diallage family, 168.
Aurora borealis seen at Paris, 396.
Austria, rail roads in, 174.
Azotic gas in warm springs, 383.

B.

Babbage, Prof., on the decline of Science in England, 164, 172.
Bache, A. D., Prof., on a safety apparatus for steam boats, 317.
Bakewell, R. on the salt springs of Moutiers, 219.
Berlin, history of, 389.
Berzelius, his System of Chemistry, 95.
Betuline, a supposed new principle in birch, 282.
Birds, American, a new work on, 161.
Birch, bark of, containing a supposed new principle, 282.
Black Sea, analysis of, 188.
Bloodgood, S. De Witt, on Halos, 297.
Bone caves in New Holland, 380.
Bones, fossil, from Kentucky, 370.
Bonnycastle, Capt. on the geology of the Cataraqui, 74.
Bored wells, 392.
Boston Mechanics' Magazine, 160.
Botanic Garden of St. Petersburgh, 175
Branch mint in North Carolina, 401.
Brande's Manual of Chemistry, 88.
Brewsterite, analysis of, 198.
Bromine, preparation of, 194.
——— in salt works at Hingham, 161.
Bronn, Prof., his proposal to exchange petrifactions, 397.
Browne, H. Mr., notice of, 307.
Buffalo mineral spring, 156.

C.

Canada, literary and scientific societies of, 168.
Caoutchouc, electrical properties of, 404.
Carbon, crystallized, 167.
Carbonic acid in the air, 183.
Carburetted hydrogen gas, as fuel for steam boilers, 10.
——— decomposition of, 186.
Carpenter, G. W., on Peruvian Bark, 52.
Cass, Gov., on the tides at Green Bay, 217.
Cataraqui, geology of, 74.
Cassius, the purple powder of, 192.
Central forces, 65, 291.
Chalybeate water, a remarkable one, 384.
Charring of wood, 189.
Chenevix, M., notice of, 305.
Chile, plants of, 248.
Chloride of silver, 193.
Christie, Dr., reply to, by Prof. Olmsted, 373.
Chromate of potash, pure, 409.
Chronometers, purification of oil for, 166.
Cinchonia, remarks upon, 52.
Clemson, T. G., on the manufacture of Sulphuric acid, 347.

Climate, change of, 130, 377.
Cohen, Mr., on crystallized carbon, 167.
Compression of gas, producing heat, 180.
Conchology, American, 400.
Conrad, T., notice of his work on shells, 400.
Conwell, Dr., on light, 350.
Cooper's disclaimer, 413.
Crystallization, a singular kind of, 128.
Crystals in living plants, 382.
Currents in the ocean, 180.
Cypræa, monograph of, 379.

D.

Daubeny, Prof., on azotic gas in warm springs, 383.
Davy, Sir H., notice of his last work, 170.
Despretz, C., on crystallizable acetic acid, 186.
——— the decomposition of carbonic acid, 186.
——— on the decomposition of water, 186.
Diallage, affinity of, with augite, 168.
Diophantine Problem, solution of, 295.

E.

Eaton, Prof., on a supposed fossil crotalus, 122.
——— on the gold rock of Mexico, 124.
——— on the fish of Hudson river, 150.
——— notice of his geological labors, 419.
——— on the reflective goniometer, 158.
Economical steam boat, 41.
Education, 413.
——— in Lyons, 174.
Electro-magnetic properties of metallic veins, 136.
Electricity of the atmosphere, 179.
Electricity, decomposition by, 179.
Electro-magnet, a large one at Y. Coll. 201.
Elements of Chemistry, notice of, 96.
Encyclopaedia Americana, notice of, 167, 416.
Erythronium, a new metal, 386.
Explosions of Steam boilers, 415.

F.

Featherstonhaugh, G. W., new Journal of, 412.
Field, Gen. M., meteorological table and remarks, by, 261.
Fire, protection from, by peculiar dresses, 96.
Fish in Hudson river, 150.
Flame, protection from, by a new invention, 96.
Floating Pumice, 161.
Fossil animals, 382.
Fossil bones from Kentucky, 370.
Fossils, proposal for the exchange of, 397.
Fuel for steam boilers, 133.
Franklin Institute, journal of, 412.
——— Society of Providence, proposal of 415.
Friend of Mankind, a new journal, 414.
Fromont, garden of, 83.

G.

Galvano-magnetism, 143.
Garden of Fromont, 83.
Gay-Lussac's lectures, 94.
Gold coinage in the U. States, statistics of, 401.
——— formation of Mexico and U. States, 124.
——— mines of N. Carolina, 401.
Goodrich, Mr. J., on the volcanic region of Hawaii, 228.
Green's elements of chemistry, 89.
Greywacke, scratches on, 124.
Griscom, Prof., translations by, 96, 172, 269, 377.
Gulph stream, loss of vessels in, 158.
Gum ammoniacum, 399.
Gunpowder, composition of, 190.

H.

Hail storms, reply to Christie on, 373.
Halos, solar and lunar, 297.
Hare, Dr., his Compendium of Chemistry, 95.
Hayden's Geological Essays, 164.
Hayes, A.A., on pure chromate potash, 409.
——— on a singular crystallization, 128.
Hawaii, volcanic region of, 228.
Heat produced by compression of gases, 180.
Heidelberg collection of rocks and minerals, 398.
Henry, Prof. J., on magnetic attractions and repulsions, 340.
——— on a large electro magnet, 201.
Henry, Dr., notice of his elements of chemistry, 89.
Herrings, on the discovery of the method of curing them, 183.
Hildreth, Dr. S. P., Meteorological remarks by, 126.

Hitchcock, Prof., lectures on regimen, 163.
——— on topaz in White mountains, 410.
Horns and hoofs, new use of in the arts, 394.
Horticulture, 167.

I.

Indiana, historical society of, 163.
Ink, improvement in, 195.
Insects, proposals for the exchange of, 168.
Iodine, efficacy of in medicine, 386.
——— in angina pectoris, 411.
———, tincture of, 196.
Iodic acid, and Morphine, action on one another, 184.
——— crystallized, preparation of, 185.
Iron, manufactured in Wales, 182.
—— trade of Great Britain, 176.

J.

Johnson, W. R., on the rapid production of steam, 308.
Joslin, Prof., notice of his memoir on vision, 410.

K.

Kuhlmann, M., on sulphate of copper in bread, 269.

L.

Lakes of North America, tides of, 205.
Laugier, lectures of on Chemistry, 44.
Law, Journal of, 417.
Lawrence, Sir T., notice of, 308.
Leavenworth, Dr., description of a new plant, by, 343.
Leibnitz, analysis of his Protogæa, 56.
Leonhard, Prof., arrangement of rocks by, 182.
——— his proposed work on trap, 170.
Light, on refraction of, 351.
Lightning, tubes of sand, formed by, 396.
Lithia, new process for obtaining, 194.

M.

Maclure, Mr., on the geology of Mexico, 406.
Magazine of useful and entertaining knowledge, 412.
Magnesium, preparation of, 408.
Magnetic attraction and repulsion, 340.
Mapping instrument, 159.
Marl for manure, 410.
Mason, O., on the bark of the white birch, 282.
Mastodon, bones of, from Kentucky, 370.
Mather, Lieut., on aluminium and magnesium, 408.
Mauch Chunk, mines of, 163.
Metallic veins, electro magnetic properties of, 136.
——— salts, decomposition of, 187.
Meteorological journal kept at N. Bedford, 162.
———————Boston, 264.
———————N. Fane, 260.
———————Marietta, 126.
——————— observations, 361.
Mexico, geology of, 406.
Miller, F. S., notice of, 300.
Minerals, localities of, 170.
Mineral spring of Buffalo, 156.
Mitchell, Prof., on the Protogæa of Leibnitz, 56.
——————— storms, 361.
Mitcherlich, M., on fuming nitric acid, 185.
Morphine and Iodine, action on one another, 184.
Moutiers, notice of the salt springs of, 219.
Murray's Elements of Chemistry, 92.

N.

Naturalists, German, meeting of, 175.
Necrology, 174.
New York, statistics of, 147.
Nitric acid, fuming, 185.
Nitrous atmosphere of Tirhoot, 199.
Nuttall, his proposed work on birds, 154.

O.

Ohio canals, 416.
Olmsted, Prof., his reply to Dr. Christie, 373.
Ornithology, American, 154.

P.

Peruvian bark, a new variety of, 52.
Petersburgh botanic garden, 175.
Physics, Elements of, 155.
Phosphorus, mode of powdering, 194.
Pinguite, a new mineral, 197.
Planera, notice of, 377.
Plants of Chile, 248.
Platina lamp, 385.
Polarizing rocks, 198.
Porter, Dr., on the garden of Fromont, 83.
Problem, 410.
Prunnerite, a new mineral, 197.
Prussia, Universities of, 388.
Purple powder of Cassius, 192.

Q.

Quinia, remarks upon, 52.

R.

Rail roads in Austria, 174.
Railway, how cleared from snow, 166.
Redfield, W. C., on storms of the Atlantic coast, 17.
Reflecting goniometer, remarks on, 158.
Rennel, Maj. J., notice of, 304.
Renwick, Prof., review of his work on steam engines, 322.
Rocks, new arrangement of, 182.
Royal Society of London, notice of, 172.
Rumker, C., on currents in the ocean, 180.
Ruschenberger, Dr., on the botany of Chile, 248.
Russian Universities, 176.

S.

St. Petersburgh Academy of Sciences, 389.
Salicine, 384.
Salt springs of Moutiers, 219.
Sargasso weeds, 181.
Schoolcraft, H. R., notice of his discourse, 166.
———— letter on the tide of Lake Superior, 213.
Scratches on greywacke, 124.
Sea salt containing arsenic, 193.
Serullas, on iodic acid and morphine, 184.
Shepard, C. U., extracts from foreign Journals by, 197.
———— experiments with Henry's magnet, 201.
Shooting stars, 153.
Siberian elm, notice of, 377.
Silliman, Prof., Elements of Chemistry by, 96.
Silver, chloride of, 193.
Smithson, Mr., notice of, 306.
Societies, literary and scientific of Canada, 172
Solar halos, 297.
Specification of an improvement in steam boilers, 10.
Statistics of New York, 147.
Steam, on the rapid production of, 308.
Steam boat, description of an economical one, 14.
Steam boats, means of safety in, 1.
———— safety apparatus for, 317.
———— proposal to build, 163.
Steam boilers, fuel for, 133.
Steam engine, premium for a safe one, 178.
———— treatise on, 322.
Stewart, Rev. C., on Sandwich Islands, 229.
Storms of the Atlantic coast, 17.
—— remarks upon, by Prof. Mitchell, 361.
Strong, Prof., on Central forces, 65, 291.
Sullivan, J. L. description of a steam boat, 14.
———— improvement in steam boilers, 10.
———— on safety of steam boats, 1.
Sugar from starch, 195.
Sulphuric acid, smoking, 347.
———— crystaline compounds in, 384.
Sulphate of copper in bread, 269.
———— potash and copper, 195.

T.

Taste, the seat of, 180.
Tempering of metallic wires and springs, 393.
Ten Eyck, Dr., account of a large electro-magnet, 201.
Thénard's System of Chemistry, notice of, 94.
Thomas, E., on the achromatic microscope, 265.
Thompson, Wm. A., account of marks on graywacke, 124.
Thomson, Dr., on light and heat, 93.
Thunder storms in Switzerland, 178.
———— France, 395.
Tides of the North American lakes, 205.
Topaz of the White Mountains, 410.
Transition rocks of the Cataraqui, 74.
Trap, and rocks altered by it, 170.
Tüllia Pycnánthemoïdes, a new plant, 343.
Turner's Elements of Chemistry, 88.

U.

Ure's Dictionary, 93.
Ure, Dr., on the composition of gunpowder, 190.

V.

Vanadium, a new metal, 386.
Van Rensselaer, Gen., note on Eaton's survey, 419.
Vaporization, limits to, 189.
Volcanic region of Hawaii, 228.
———— Kirauea, 229.
Volcano in New Zealand, 381.
Voltaic electricity, 177.

W.

Water, on the decomposition of by atmospheric electricity, 179.
Water, decomposition of, 186.
Webster's Manual of Chemistry, 89.
Wells, bored for water, 392.
Wheeler, A. D., solution of a problem by, 295.
Whiting, H. Maj., on the tides of the N. A. Lakes, 205.
Wilder, C., on analytical geometry, 285.
Wires, covering for, 409.
Wirtemberg, kingdom of, 176.
Wolves, stock destroyed by them in Russia, 177.
Wood, charring of at low temperatures, 189.

Z.

Zeolite, recent formation of, 382.
